M.Tech. in Communication Systems and Machine Learning (CS & ML)
DA-IICT was founded in 2000 as a unique university devoted to the cutting-edge interdisciplinary area of Information and Communication Technology (ICT). ICT was emerging as the technology of the future bringing in the fourth Industrial Revolution. Well known and highly qualified faculty members joined DA-IICT and developed a curriculum and research program steeped in all aspects of ICT, societal, scientific, and technical. This spirit has been nurtured for the last 18 years and DA-IICT wants to continue its excellence in interdisciplinary teaching and research well into the future.

The Act No. 6 of 2003 of the Gujarat Legislature provided for the establishment of the DA-IICT and conferred on it the status of a University. On 30 November 2004, the DA-IICT was included in the list of Universities maintained by the University Grants Commission under Section 2(f) of the UGC Act, 1956. DA-IICT is a member of the Association of Indian Universities (AIU) as approved by the AIU at its 84th Annual Meeting held during 12-14 November 2009. The National Assessment and Accreditation Council, Government of India has accredited DA-IICT with an ‘A’ Grade in 2017.

Vision and Mission
The vision of the institute is to become a globally recognized institution that offers innovative programs, outstanding faculty, an atmosphere of innovation, a responsive administration, a vibrant campus and a collaborative learning environment that continuously adapts to the changing landscape of research and innovation and the future of work. Toward this, we plan to design and deliver academic programs in both disciplinary and multidisciplinary domains to prepare students for a rapidly evolving work environment.

Ranked among top 100 Engineering Institution by MHRD, Govt of India (NIRF-2019 rankings)

NAAC (Accreditation): A Grade (Year- 2017)
Annual Student Scholarships: INR 3-4 Crores

First Private University to mentor PPP model based (central, state and industry funded) Institute - IIIT Vadodara (build academics and provided faculty support)

Only Anchor Institute in Gujarat to mentor the Faculty members of Engineering Colleges in Gujarat

Awarded the Best University in Innovation in Gujarat by Govt. of Gujarat in 2017
C. R. Rao AIMSCS is engaged in cutting-edge research in areas of Mathematics, Statistics, Wireless Communication, Computer Science, Machine Learning and interdisciplinary fields. The Institute was established in honor of Prof CR Rao, FRS in 2005. It is located on the campus of the University of Hyderabad in an area of about five acres. The institute is autonomous body registered society under AP Societies Registration Act. (Regd. No. 547/2005) and recognized as SIRO by Department of Scientific and Industrial Research (DSIR) and also research centre recognition by University of Hyderabad. A Full-time two-year M. Tech program in Information Security with Cyber Security specialization is started for the 2018-19 academic year jointly with University of Hyderabad an approved by AICTE. It is expected to be a model in cooperation with emphasis on Synergy of efforts in problem solving. The Institute having outstanding faculty and research staff drawn in equal pro-portions from the fields of Mathematics, Statistics, Computer Science and Electronics and Communications. The institute provides a forum for national and international experts from different fields to meet and address problems of mutual interest. The mission of the Institute includes dissemination of advances made in these fields to the society through workshops and conferences, short courses, guiding doctoral students and providing consultancy services to researchers in government as well as industrial organizations. The Institute has conducted several national and international conferences and workshops in Cryptology, Information Coding and Security including INDOCRYPT 2010, INDOCRYPT 2019 and SPACE 2016. AIMSCS has established Centre of Excellence in Mathematical Sciences, Machine Learning and Artificial Intelligence, Cryptography and Cryptanalysis, Wireless Communication and Cyber Security.

Mara (Malaysia), Univ. of Evora (Portugal), ISEP (France), ISRO, Indian Navy, ISI Kolkata, TCS, Samsung R&D, IIT Gandhinagar, IIT Jammu, IIIT Vadodara, C R Rao AIMSCS, EDII
The main question that you, an interested and prospective applicant to the MTech CS-ML program, have as you read this is “should I decide to enroll in this program?” We believe the answer is “Yes”. The following are the reasons, which also provide an overview of this degree program.

One, both the CS (Communication Systems) and the ML (Machine Learning) are at the forefront of the technological advances that the entire human society will experience over the next ten years. In the list of 10 key high-tech industries of the 21st century, the Chinese President Xi has included 5G communications and artificial intelligence as the two such key technologies. You will study both these technologies as a part of this degree program and will acquire a skill set that will position you to be hired by the industries working in these domains. The companies such as Amazon.com (Project Kuiper), Tesla (Starlink), Google (Project Loon), facebook (Internet from the Skies), Qualcomm, Virgin Atlantic and Bharti Airtel (OneWeb), to name just a few, are launching multi-million dollar mega projects which combine the state-of-the-art in the communication systems and machine learning. The coming-together of the communication systems and machine learning is an exciting convergence and this degree program will enable you to stand at the forefront of this joint domain. **This degree will allow you to position yourself at the right place at the right time.**

Two, the specialization is the key in today’s competitive job market. As an example, those entering the medical college today are seldom content with a basic degree in medicine – they insist on specializing, since greater their specialization, the greater their ability to stand apart from the crowd and, more importantly, to contribute toward solving a specific set of problems that very few have expertise for. **When you graduate from this program, you will acquire not only the ML skillset, but unlike many of your contemporaries, you will also become an expert in the communication technologies and signal processing – this is a unique specialization which will be highly coveted by the industries over the next at least ten years.** Many of our recent graduates have obtained job offers from the companies such as Qualcomm, Perfect Wireless, TCS, etc. There is a 100% rate of employment of our alumni who maintained their CGPI (cumulative grade point average) above a threshold during the degree program.

Three, apart from the practical and pragmatic career-oriented considerations such as the above, there is a more fundamental reason for studying a course on the CS combined with the ML. The ability to communicate that we humans possess is not disconnected from our intelligence – the intelligent agents are naturally highly skillful communicators and vice versa. Similarly, to become an expert in the machine intelligence, one has to learn the theory of communication and signal processing.

The expertise in the former cannot be achieved without mastering the latter. The evidence of this lies in today’s modern communication device --- be it the cellphone, the computer connected to Internet, or the satellite TV. As these machines become increasingly intelligent, they also become superior communication devices. The smartphone is “smart” not only because it offers many Apps, but more fundamentally because it actively helps its owner --- without the owner’s awareness --- in the process of communication.

The messages (audio, video, images, etc.) are “understood” by the communication device and are compressed before the transmission (similar to how the essence of a lengthy speech by a politician is often summarized by a journalist before it is succinctly published in the newspaper).

The smartphone also intelligently overcomes the effect of noise and interference during the message transmission (this is similar to how your brain can infer the message even though it hears only a few of the words spoken by your friend in a party room when the rest of his/her words are drowned in the loud music playing in the background). The result is that the we – the end-users of the smartphones – hear clean, uninterrupted, speech or watch videos that do not buffer even though the communication links may be highly noisy.

The magical (though taken-for-granted) ability of our communicating brains that allows us to read between the lines or understand the meaning even when we do not hear part of the conversation is highly sought after in the machine learning community.

This is a unique degree program in which you will study both the communication/signal processing theory and the theory of machine intelligence in an integrated and unified manner – the manner in which our brains work shows that this is the natural approach toward a study of these two theories.
The objective of this program is to equip the students with the competency and skill sets of two different domains – communication systems and machine learning. Specific goals are (i) to impart strong foundations, tangible and employment-ready skills and the state-of-art knowledge in the CS and the ML; (ii) to provide analytical and technical platform using which the students can opt either for the higher (doctorate-level) studies or employment at a corporation either in India or abroad.

In this degree program, you will study the fusion of the advanced algorithms that lie at the heart of the digital communication systems and those that drive the machine intelligence. You will study, implement and experiment with the Maximum-A-Posteriori (MAP) and Maximum Likelihood (ML) Detection algorithms, the matched filter and the adaptive stochastic gradient descent based algorithms, the belief propagation algorithms operating on bipartite Tanner graph, the dynamic programming and the heuristic search algorithms (e.g., the Dijkstra’s algorithm, the A* search, etc.), the Least-Squares, the Recursive Least Squares, the Least Mean Squares and the MMSE algorithm, the Expectation Maximization (EM) algorithm, linear and nonlinear interference cancellation algorithms, the backpropagation algorithm on multi-layered Neural Networks, etc. You will apply these algorithms to solve the practical problems of digital communication, digital signal processing and machine learning applications.

Towards this, the curriculum includes the courses that provide the students both the theoretical foundation and the hands-on experience through the Lab sessions. A well-rounded curriculum will be delivered by the competent faculty. The program is well supported by placement process through a centralized placement cell of the institute.

MTech Thesis Research Continued 0-0-26-13

**Total Credits** 32-0-56-60

1 lecture hour contributes 1 credit; 1 tutorial hour contributes 1 credit; 2 laboratory hours contribute 1 credit

Total Seats: 23
The total number of seats offered will be 23 (18 plus 5 sponsored candidates).

Course Fees
The fees to be paid for the course shall be as per the existing structure at DA-IICT. Details are available at https://www.daiict.ac.in/admissions/post-graduate/m-tech-ict-admissions/#fees-structure

Eligibility Criteria
B.E. (first class) or equivalent in Electronics and Communication (EC) or equivalent with consistent good academic records, and having a valid GATE score in EC will be eligible to apply for this program. Admission process will be conducted jointly by CR Rao AIMSCS and DA-IICT. Final selection will be based on the valid GATE score in EC and personal interview of the select candidates. The following table summarizes the eligibility criteria and admission process.

<table>
<thead>
<tr>
<th>Criterion</th>

Note 1: GATE qualification requirement is waived in Regular Candidates' Category 2 - which is open for the candidates with a strong academic record in their undergraduate degree program.

Selection Process
Visit the Institutes website: www.daiict.ac.in/admissions/post-graduate/m-tech-ict-admissions/

How to Apply
Candidates submit an online application by clicking on the link given on the Institutes website.

Important Dates
- Online application website opens: February-March
- Last date for submission of online applications: April-May
- Interview for Non-Gate Applicants: June-July
- Announcement of Merit List: June-July
- Commencement of Classes: July

Fees Structure*
Tuition and Registration Fees: Rs. 67,000 per Semester

Education Loan
The Institute will facilitate the students to avail educational loan from selected Banks. The bank officials will be present on campus at the time of registration of admitted students so as to enable the students to obtain details on procedures and terms and conditions of the loan. The students can also avail loan from banks of their choice and in either of the case; the Institute will extend support in completing the loan documentation process.

Financial Assistance
All GATE admitted students would be eligible for a monthly stipend of Rs. 12400/- in the form of Teaching Assistants in the first semester. In subsequent semesters, the continuation would depend on their satisfying the academic requirements.

For Inquiries: Voice Call: 080 66 91 91 80
Professors P. Mekala and S. Goel at CR-Rao Institute are interested in, and actively working on, the research topics of (i) security protocols for the IoT systems and M2M (machine to machine) communications, (ii) synchronization and cell search algorithms for the Long Term Evolution (LTE) wireless systems, (iii) cryptography for the Massive MIMO (Multiple Input Multiple Output) systems, (iv) image transmission using USRP using different modulation and coding techniques, (v) network slicing in 5G wireless systems using machine learning algorithms, (vi) side channel analysis and light weight block cipher on an FPGA (field-programmable gate array), etc.

Professors A. Jindal, R. L. Das, S. Mandal and Y. Vasavada at DA-IICT and Professors P. Mekala and S. Goel at CR Rao Institute are interested in and working on the research topics of (i) application of machine learning techniques to the physical layer of 5G communication systems, specifically to nonorthogonal multiple access (NOMA) and Massive MIMO, (ii) model-checking and efficient signaling design of cyber physical systems (CPS), (iii) parameter estimation of the noise present in the real-world color image and dehazing of the images, (iv) compressive sensing based or adaptive filter based channel estimation for orthogonal time-frequency-space (OTFS) modulation applied to Massive MIMO, (v) efficient detection algorithms for the spatial modulation and generalized spatial modulation in the 5G systems, (vi) compressive sensing based wideband spectrum sensing using machine intelligence and belief propagation algorithms, (vii) hybrid beamforming algorithms based on advanced signal processing and deep learning, (viii) low density spreading method for NOMA and the detection algorithms at the NOMA receiver based on the compressive sensing and machine learning, (ix) efficient machine-learning based implementation of the belief propagation algorithms for the LDPC and the Polar codes in 5G communication systems, etc.

Prof. D. Ghodgaonkar, A. Ghosh, S. Gupta and Y. Vasavada at DA-IICT are interested in (i) application of advanced signal processing and machine intelligence algorithms to Interference Mitigation in the navigational satellite systems using phased array antennas, (ii) development of smart antenna array adaptive and blind beamforming and tracking algorithms for the satellite on the move (SOTM), (iii) network management, planning and capacity analysis for the satellite and Unmanned Aerial Vehicle (UAV) based wireless communication systems, (iv) ground-based beamforming for next-generation satellite communication systems, (v) design of efficient LDPC and Polar encoding and decoding methods for the navigational and optical satellite links, (vi) design of microwave non-destructive testing (NDT) methods, (vii) design of dielectric resonator antennas for the navigational satellites, (viii) theory and simulation of the optical wireless signals encrypted with chaos, etc.

As an MTech student in the CS-ML program, you will have opportunity to interact with the above faculties during the first year of your degree program (you will likely take the classes taught by many of these faculties and you will come to know them and their research very well). You will have freedom to choose the faculty advisor of your choice for conducting your MTech thesis research in the second year of your program. The thesis topic will be selected by

you based on consultations with your thesis advisor. In addition, you will also be given an opportunity to pursue an industrial/research internship during the summer semester (the internship often leads to a full-time job offer once the student graduates). There are several on-going government-sponsored research projects lead by the above faculties at these two Institutes. As an MTech CS-ML student, you have a good chance of obtaining the research associate position (Junior Research Fellow or JRF) in these projects during the two years of the degree program. The JRF research is typically well-aligned with his/her MTech thesis, it is a prestigious and highly-paid position. Finally, the MTech thesis research, irrespective of whether it is conducted as a part of a sponsored research, will pave the way toward a possible doctorate study program either in India or abroad, in case you opt for the Ph.D. studies.

From the Board of Studies (BoS),
MTech CS-ML Degree Program

Prof. Ribhu, Assistant Professor, IIT-Guwahati
As a member of the BoS for this MTech CS-ML program, I have been involved in multiple detailed deliberations conducted among the various faculties of DA-IICT, CR Rao Institute, several IITs and Industry Representative. We have carefully crafted this program and given a lot of thought to its structure and organization. I am quite excited with the way this program has turned out. I am positively hopeful that both the students and their prospective employers will find the skills gained from this program quite useful.

Dr. Sumitesh Sarkar, Outstanding Scientist, Group Director, Satcom & Navigation Payload Area, Space Applications Centre (ISRO), Ahmedabad.

Communication System is at the heart of our modern Information Centric Society, powering today’s entertainment and tomorrow’s advance communication links - wired, wireless and space. In order to design high speed, agile and high frequency-Ku/Ka band on board communication transponders, Space Research Institutes/Space Industries need Communication Engineers with strong academic foundations in Communication Systems and underlying Mathematics as well as strong exposures and required technical skills to apply data driven Machine Learning (ML) techniques in designing channel decoders, demodulators, allowing high and seamless throughput even in presence of coexisting terrestrial channels etc.

I strongly feel this Post Graduate program- MTech in CS-ML will create quality human resources who can take up research challenges in applications of ML tools in Communication Systems design. In addition, this program will also impart Industry ready skills to handle other applications using ML techniques.
Alumni-Speak

I joined DA-IICT in 2018 to pursue my MTech in ICT. I had done my bachelor's in Information Technology and had no exposure to communication systems. The introductory course titled “Basics of Communication System” (offered in my first semester) intrigued me. The curriculum was designed so well that it laid down a very strong foundation of the fundamental courses and gave liberty to select from a wide spectrum of elective courses. I chose “Digital Communication with applications of Machine Learning” as my area of research. Here at DA-IICT, I learned the meaning of research in the true sense; research is not just about coming up with novel ideas that solve problems, but it is also about understanding the underlying concepts and justifying the new idea with apt analysis. Along with rich opportunities to sharpen my technical skills, DA-IICT provides a range of co-curricular and extra-curricular opportunities in form of the technical fest, sports fest, cultural fest, and a number of hobby clubs to maintain the balance. Not to forget among all this, there are ample companies visiting our campus that give us commensurate chances to get top-notch jobs. The culture at DA-IICT equips us with competent technical skills and smart inter-personal skills to be prepared to face the trials and tribulations of the real world.

Shubham Malaviya (year of graduation: 2019, thesis topic: Defending Machine Learning Models against Adversarial Attacks Using GANs, current employment: Tata Consultancy Services (TCS))

DA-IICT always works to sustain academic excellence and personalized attention for its students. We are encouraged to think about how we will and can move forward every day towards reaching our goal. M.Tech curriculum offers programs to keep us on the road to research and professional success. I opted for courses across various domains (image, text, statistics), which motivated me to brainstorm on how to apply Machine Learning to real-life problems. Thus, improving my problem-solving ability, which most industries sought. And one of the best parts about DA is the Resource Center through which we gain access to online academic resources. My M.Tech research helped me to get a research-related job offer aligned with my area of interest. Moreover, always helpful professors and fellow students make the journey more enjoyable.

I have had a very good learning experience at DAIICT. The professors here are approachable and are friendly to the students when we approach them regarding our doubts. The lab sessions also help in understanding the course work. The lab facilities which are available to us help us in pursuing our interests. We are offered elective courses which we can choose based on our interest and also align the courses that we take with the research work in the second year. The campus life is vibrant with extracurricular activities apart from the regular academic curriculum.

Divya (year of graduation (expected): 2021, thesis topic: Channel Estimation for the Orthogonal Time Frequency Space Modulation)

This program is jointly offered by reputed institutions like DA-IICT and CR Rao AIMSCS, which gives us an opportunity to learn various interrelated subjects from the very basics. The course helped us develop a good understanding of communication systems and the lab work gave us hands on experience of developing algorithms for the same. In the recent works the ML algorithms are found to be very helpful for solving the wireless communication problems, so this modified course will be offering a complete package with which you can greatly contribute to the research community or use this skill set in the industry. DA-IICT has a lot to offer from well-equipped labs to highly experienced faculty and a joyful campus life.

Students-Speak

The program offered by DA-IICT makes sure to build up a strong base in areas of signal processing and communication technologies. It had a good mix of courses from other domains such as VLSI and statistical mathematics to act as a bridge between theory and practice. My learning experience at DA was very engaging. The faculties as well as the Director sir at DAIICT are very approachable, understanding and polite. They take interests in students’ problems very keenly and provide necessary feedback timely. DA-IICT is also very well equipped with laboratories which are specially designed for ECE students. They have a separate RF, Communication Engineering & HPC Labs which are put to good use by ECE students here.

I have had a very good learning experience at DAIICT. The professors here are approachable and are friendly to the students when we approach them regarding our doubts. The lab sessions also help in understanding the course work. The lab facilities which are available to us help us in pursuing our interests. We are offered elective courses which we can choose based on our interest and also align the courses that we take with the research work in the second year. The campus life is vibrant with extracurricular activities apart from the regular academic curriculum.

Divya (year of graduation (expected): 2021, thesis topic: Channel Estimation for the Orthogonal Time Frequency Space Modulation)

This program is jointly offered by reputed institutions like DA-IICT and CR Rao AIMSCS, which gives us an opportunity to learn various interrelated subjects from the very basics. The course helped us develop a good understanding of communication systems and the lab work gave us hands on experience of developing algorithms for the same. In the recent works the ML algorithms are found to be very helpful for solving the wireless communication problems, so this modified course will be offering a complete package with which you can greatly contribute to the research community or use this skill set in the industry. DA-IICT has a lot to offer from well-equipped labs to highly experienced faculty and a joyful campus life.
I am a PhD student pursuing research in the field of wireless communication, however my journey in DA-IICT started a little earlier when I enrolled for MTech program. Both MTech as well as PhD programs are very comprehensive and most importantly, the subjects taught are in line with the recently developing technologies. The labs are highly functional and equipped with tools which give a hands-on experience along with classroom learning. With the experience of our professors and DA-IICT’s inclination towards research, I got the opportunity to work on an ISRO RESPOND research project, which has eventually connected me to the practical scenarios of the real world. Being a student, I feel the institute has given me ample freedom and support in carrying out my research work. To relieve stress and connect with oneself, the campus life offers a bag full of co-circular activities. The friendly environment and the evenings in DA, with birds chirping around, chit chatting with colleagues and faculties over a cup of tea are the moments I will always cherish. So far, it has been an enriching journey to learn and grow under the guidance of our esteemed professors. The institute has given me a platform to push myself and uncover my hidden potentials.

Hai, I am Bibin, a Ph.D. scholar at DA-IICT, working on Next Generation Wireless Communications under the guidance of Prof. Yash Vasavada. I have been to a few campuses in my life, both as a student and a teacher, and you can believe me when I say DA-IICT is the best thing that has ever happened to me. With well-qualified and student-friendly Professors, the green campus always keeps you calm and lively. The campus is always full of life and keeps you going one way or another. The research life in DA is a great motivation for any prospective student. If you ever feel saturated with the lab-life, you can move out onto your favorite spots on the campus, or to the Resource Centre (my personal favorite is the black-tea working hours in the open cafeteria). Specifically for MTech CS-ML students, there is a wide range of open research opportunities -- the Communication, Signal Processing and Machine Learning group, the Speech Research group, the Microwave and RF research group -- leading the way. As for your career, as Baba Ranchoddas said “Pursue excellence, and success will follow”, as the alumni who worked/working at Qualcomm, Dolcera, Hughes Network Systems would validate. Hope to see you in DA soon, Knowledge is Leadership!
Placements
The Placement Cell at DA-IICT works professionally with the Industry to explore opportunities for DA-IICT graduates for placements. The Cell makes its best efforts to reach out to all sub-sectors of the industry in order to ensure that DA-IICT graduates spread across the industry. DA-IICT has hence contributed to the industry by successfully delivering fresh recruits who have contributed continuously to the growth of the industry by being a part of the top-notch organizations. The MTech CS-ML students will additionally possess skills that match the job requirement at the companies such as Broadcom, Qualcomm, Nokia, Ericsson, Huawei, NEC, Cisco, Apple, Intel, Rhode & Schwartz, National Instruments, Keysight/Agilent, Samsung, TCS Innovation Labs, Dolcera Private Ltd, Altran India, Sasken technologies, Lekha Wireless, Saankhya Labs, Astra Rafael, Comsys, Truminds Software Systems
http://placement.daiict.ac.in/

Alumni Network
The DA-IICT Alumni Association exists to create and maintain a life-long association between the Institute and its alumni. The Association works to connect alumni, support students and build an extraordinary institute experience through a diversity of events and celebrated traditions. The mission of the Association is to cultivate strong bonds between alumni, students and the Institute, to keep alumni acquainted, and create a network enabling them to remain involved with their alma mater.
https://daiict.almaconnect.com/

Placement Statistics (Last 3 years)
Median Salaries in INR
PG: 5.5 Lakhs, 6 Lakhs, 7 Lakhs
UG: 9 Lakhs, 10.5 Lakhs, 14 Lakhs
Highest Salaries in INR
52.5 Lakhs, 39 Lakhs, 43 Lakhs

Students opting for Higher Studies (For MS & PhD)
CMU, Georgia Tech, MIT, ASU, Cornell Univ, Maryland, Colorado Boulder, Univ. of California, Texas A&M, Univ. Oxford UK, John Hopkins, Ecole Polytechnic de Montreal Canada, ISEP France,
DA-IICT is spread over 50 acres of land in Gandhinagar, Capital City of Gujarat. The DA-IICT campus is caringly planned and designed as an environmentally conscious campus in the country. The architecture of DA-IICT is functional, but what surrounds it is a fascinating garden. The entire design is oriented towards preserving the environment. The campus with trees, lawns and bushes bearing green leaves and exotic flowers surrounding the buildings and pathways instils environment consciousness among students and enrich their learning. The campus also has a herb garden with species of rare medicinal plants.

The landscape was planned and developed in a manner that no rainwater is lost. The irrigation for campus garden and lawns is carried out with recycled water. Its solid waste management system churns out organic fertilizer out of dry leaves, vegetable and food waste generated from food courts.

The campus is a haven for bird-watchers, with a variety of species of birds being spotted.

DA-IICT can be reached in about 30 minutes from Sardar Vallabhai Patel International Airport and the Central Railway Station located in Ahmedabad.
Campus Life at CR Rao Institute

CR Rao AIMSCS is located in the University of Hyderabad (UoH) Campus in Hyderabad, which is a city for Multinational Companies, Research Organizations and industries in Telangana. The institute is a 5acre unit in the UoH campus which is 2300-odd acres, has a large area under forest cover, with two perennial and three seasonal lakes, as well as rock formations characteristic of the Deccan. It is home to 734 plants, 10 mammals, 15 reptiles and 220 birds’ species (at last count). Notable animals include spotted deer, hares, peacocks, porcupines and wild boar. The campus also has a protected megalithic site. The institute is having state of Art lab facilities of Wireless Communications Lab, Advanced Wireless Communications and IoT lab, Computer Networks and Android Lab, High Performance Computing Lab of 100 Teraflop system (CPU+GPU) with 100TB HPS Storage facility, Machine Learning and Artificial Intelligence Lab. The institution has been working in the Machine Learning, Cryptography and Cryptanalysis, wireless communications and Computer Networks domain with respect to security analysis in GSM, 4G-LTE, VoLTE, 5G, IoT, Wi-Fi, and Satellite communications. CR Rao AIMSCS can be reached in about 30 minutes from Rajiv Gandhi International Airport and the Railway Station located in Hyderabad.
